

15 INCH STANDARD DIPWELL™

If you have a longer freezer chest and/or a projected higher rate of customers, perhaps the 15" standard dipwell™ is what you need at the counter. It will hold eight to ten scoops and paddles upright in the three divided compartments. The stainless steel divider is easily removable for cleaning purposes.

Because the Dipwell™ is made of 24 gauge stainless steel, like good quality cookware, it can be easily cleaned by the use of a steel wool pad.

The running water Dipwell™ meets the U.S. Department of Health, Education and Welfare standards which state in Chapter 2, Section 506 (and 3-304.12 In-Use Utensils, Between-Use Storage) that any implement used to serve food must be contained in the food, be put through a dish washing cycle, or stand in cold running water.
